

MyMeds&Me[®]
Capture Purer Data, Faster

Simplify Safety Reporting On-The-Go

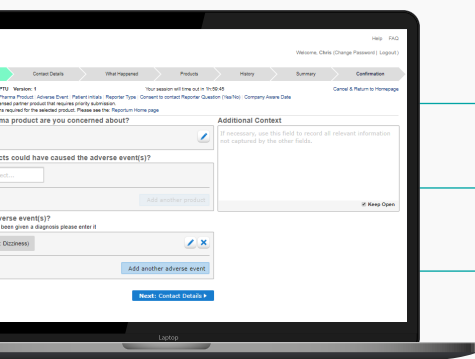

Field Force

Safety reporting is not a core focus for field-based staff, therefore inputting of reports is often completed at a later time. This means report entry is frequently incomplete and often delayed, which puts pressure on the safety team to comply with required timelines. Reportum[®] offers a simple, easy-to-use interface that guides the capture of relevant, standardised safety information and transfers adverse event data directly to the global drug safety database. This reduces the time, effort and cost compared to alternative reporting methods and allows the field force to capture complete data without impacting their core activities.

BENEFITS

- ✔ **Standardise** safety reports across all field-based employees
- ✔ **Facilitate** single-touch reporting with online & offline capability
- ✔ **Eliminate** manual reconciliation
- ✔ **Capture** complete, relevant data on first interaction
- ✔ **Eliminate** manual data entry into the safety database
- ✔ **Access** data in real-time

KEY FEATURES

- Simple user interface
- Multilingual solution
- Online/offline capability

VALUE

- Enable reporting timelines to be met
- End-to-end traceability from report creation through to safety database
- Reduce burden for field-based staff
